

SKILLS

Programming Languages

JavaScript, TypeScript

Technologies:
React.js, React-Native, Expo, Next.js, Expo Router, Redux, Redux Toolkit, Zustand, TanStack Query, Vite, React Hook Form, React Navigation, HTML5, CSS3, SCSS, Sass, Less, Tailwind CSS, Material UI, Ant Design, Shadcn UI, Radix UI, styled-components

Mobile Development & Services:
iOS, Android, Cross-Platform Mobile Development, Expo Notifications, Expo SecureStore, AsyncStorage, Firebase Cloud Messaging (FCM), Push Notifications, Deep Linking, RevenueCat, Google Sign-In, Sign in with Apple, EAS Build, EAS Submit

Node.js, NestJS, Express.js, REST API, GraphQL, JWT Authentication, OAuth 2.0, RBAC, WebSockets, Socket.IO, Server-Sent Events (SSE), Firebase Cloud Functions

Databases & Data Storage:
PostgreSQL, MongoDB, MySQL, Firebase, Supabase

Yurii S.

Full-Stack Developer React React Native Next Node Nest

SUMMARY

Full-Stack JavaScript/TypeScript Developer with 5 years of commercial experience building scalable web and mobile applications, SaaS products, AI-powered platforms, enterprise dashboards, and real-time systems.

Strong expertise in React.js, Next.js, React Native, Expo, Node.js, NestJS, and Express.js, with hands-on experience developing responsive web applications, cross-platform mobile apps, REST and GraphQL APIs, database schemas, authentication and authorization systems, and third-party integrations.

Experienced with React Native mobile development, including Expo, Expo Router, React Navigation, mobile authentication flows, push notifications, deep linking, native device APIs, mobile state management, API integration, and responsive cross-platform UI development for iOS and Android.

Experienced with PostgreSQL, MongoDB, MySQL, Firebase, and Supabase, as well as AWS, Docker, CI/CD pipelines, automated testing, performance optimization, and event-driven architectures.

Delivered end-to-end product features including Stripe subscription workflows, OAuth/JWT/RBAC authentication, real-time communication, data-intensive dashboards, mobile application features, and LLM integrations using OpenAI, Gemini, DeepSeek, and Grok. Comfortable working across the full software development lifecycle, from architecture and implementation to testing, deployment, App Store/Google Play release workflows, and cross-functional Agile collaboration.

CORE COMPETENCIES:

Full-Stack Web & Mobile Development Cross-Platform Mobile Application Development React Native & Expo Development SaaS & Enterprise Application Development Frontend & Backend Architecture End-to-End Feature Development RESTful API & GraphQL Development Mobile API Integration Database Design & Query Optimization Authentication & Authorization (OAuth 2.0, JWT, RBAC) Real-Time Applications & Event-Driven Architecture AI/LLM Integration & Prompt Engineering Payment & Subscription System Integration Third-Party & Native API Integration Cloud Infrastructure, Docker & CI/CD Performance Optimization & Scalability Automated Testing & Quality Assurance Agile Development, Code Reviews & Cross-Functional Collaboration

EXPERIENCE

Full Stack Developer for AI-powered educational platform,
Yooki Labs

Yooki Labs is an AI-powered EdTech SaaS platform that delivers personalized learning experiences through AI tutors, real-time collaboration, subscription management, and advanced learning analytics. The platform provides students, parents, and educators with role-based dashboards, AI-assisted tutoring, secure authentication, and scalable cloud infrastructure, making high-quality education more accessible and interactive.

Technologies:
NextJS, Redux Toolkit, Tanstack Query, TailwindCSS, NextAuth, SocketIO, Stripe (checkout, subscription, top-ups), i18n, Zod validation, Recharts, Docker, CI/CD
Node.js, NestJS, TypeScript, PostgreSQL, Prisma, Redis, Docker, CI/CD, Auth (JWT/OAuth),

Cloud & DevOps:
AWS (EC2, S3, RDS, Lambda), Docker, CI/CD, GitHub Actions, Vercel

UI & Data Visualization:
Chart.js, ApexCharts, Highcharts

Testing & Quality Assurance:
Jest, Mocha

AI-Assisted Development:
Claude Code, GitHub Copilot, Prompt Engineering, AI-Assisted Software Development, AI-Augmented Engineering Workflows

Tools & Platforms:
GitHub, GitLab, Bitbucket, Jira, Trello, Webpack, npm, Zendesk, Webflow.

EDUCATION

Bachelor's degree
National University of Water Environment and Engineering
Bachelor of Engineering (BEng), Computer engineering

Master's degree
National University of Water Environment and Engineering
Master of Computer Science (MSCS), Computer science

LANGUAGES

English B2

- Spoken: Upper-Intermediate B2
- Written: Upper-Intermediate B2

Stripe, WebSockets, LLM APIs (OpenAI, Gemini, Grok), Google APIs, Jest for testing, Railway for infrastructure deployment, Brevo, Sentry, Prometheus, Grafana

Responsibilities:

- Developed role-based dashboards for students and parents, including progress tracking, learning analytics, recommendations, lesson management, and activity monitoring.
- Implemented secure authentication and authorization workflows using OAuth 2.0, JWT, RBAC, custom email verification, and secure token management.
- Integrated Stripe payment infrastructure, including Checkout, Billing Portal, subscription lifecycle management, upgrades, downgrades, cancellations, and webhook processing.
- Developed real-time chat and notification systems using Socket.IO and event-driven architecture.
- Integrated multiple LLM providers (OpenAI, Gemini, DeepSeek, and Grok) with prompt engineering, contextual conversation memory, AI personas, and rich Markdown/LaTeX rendering.
- Designed and developed scalable REST APIs and backend services using Node.js, NestJS, and MongoDB.
- Optimized backend performance through database query optimization, caching strategies, and application performance tuning.
- Integrated third-party services, including Google APIs, Mapbox API, and SendGrid, to extend platform functionality.
- Participated in architecture discussions, code reviews, Agile development processes, and cross-functional collaboration with product and design teams.

Results

Successfully delivered multiple business-critical modules, including AI-powered tutoring, role-based dashboards, subscription billing, secure authentication, and real-time communication features. Built a scalable Stripe payment infrastructure supporting the complete subscription lifecycle and webhook automation. Implemented a multi-provider LLM architecture with contextual memory, prompt engineering, and AI-assisted tutoring capabilities. Improved platform performance through caching strategies and database optimization, while delivering scalable, production-ready features that enhanced user engagement, learning experience, and overall platform reliability.

AI-Powered Mobile Culinary & Meal Planning Application

Web version -**Yollly**
App Store
Google Play

Yollly is an AI-powered cross-platform mobile application designed to simplify meal planning and everyday food preparation. The platform combines intelligent recipe discovery, AI-powered food recognition, voice input, personalized meal planning, and collaborative shopping lists, helping users discover, plan, and prepare healthy meals through a seamless mobile experience.

Technologies
React Native, Expo, TypeScript, Expo Router, Zustand, TanStack Query, React Hook Form, Zod, Auth0, Firebase Analytics, Firebase Crashlytics, Firebase Remote Config, Firebase Cloud Messaging, RevenueCat, Google Mobile Ads, Deepgram API, Axios, Expo SecureStore, AsyncStorage, Expo Notifications, Expo Camera, Expo Image Manipulator, i18n, Server-Sent Events (SSE), EAS Build, EAS Submit.

Responsibilities

- Architected and developed the cross-platform React Native application from scratch, establishing a scalable TypeScript architecture and reusable component system for iOS, Android, smartphones, and tablets.
- Implemented secure authentication and account verification using Auth0, including Google Sign-In, Sign in with Apple, secure token storage, session management, and server-side verification workflows.
- Designed application navigation with Expo Router, implementing protected routes, authentication guards, deep linking, and public application flows for unauthenticated users.
- Developed an AI-powered culinary module with camera-based image capture, client-side image compression and processing, backend API integration, and voice input using Deepgram speech-to-text.
- Built an advanced Recipe Engine supporting intelligent recipe discovery, filtering, nutritional and macronutrient calculations, portion scaling, comments, and creator profiles.
- Developed a comprehensive Meal Planner and collaborative Shopping List with user invitations, shared list management, ingredient cross-referencing, and automatic shopping-list generation from scheduled meals.

- Implemented efficient client and server state management using Zustand and TanStack Query, including API caching, background refetching, optimistic updates, persistent local state, and synchronization with backend services.
- Integrated RevenueCat for cross-platform subscription management, premium plans, entitlement validation, purchase restoration, and dynamic subscription limits across iOS and Android.
- Integrated Google Mobile Ads to support rewarded advertising as an alternative monetization mechanism for non-premium users.
- Developed a cross-platform push notification system using Firebase Cloud Messaging and Expo Notifications, including foreground/background notification handling, Server-Sent Events, and deep-linked navigation from notifications.
- Integrated Firebase Analytics and Crashlytics for product analytics, production monitoring, crash reporting, and mobile application diagnostics.
- Implemented application version management using Firebase Remote Config, including minimum supported versions, feature configuration, and mandatory update flows.
- Optimized mobile performance through image optimization, request caching, local data persistence, efficient list rendering, memoization, lazy loading, and reduced unnecessary component re-renders.
- Configured EAS Build and EAS Submit workflows for development, preview, and production builds and managed mobile releases for both iOS and Android.

Results

Delivered a production-ready cross-platform React Native application for iOS and Android, managing the mobile development lifecycle from architecture and feature implementation through testing and store deployment. Built scalable AI-powered recipe discovery, voice interaction, meal planning, collaborative shopping, subscription, advertising, and notification functionality while maintaining responsive performance across smartphones and tablets. Established reliable release workflows using Expo EAS and integrated Firebase Crashlytics, Analytics, and Remote Config for production monitoring and application lifecycle management.

Full-Stack Developer for Real Estate Landing and Admin Panel

Status Luxury

Status Luxury is a modern real estate platform built for an international real estate agency, providing SEO-optimized property listings, advanced search capabilities, and a powerful Admin Panel for managing properties, client inquiries, and business operations. The platform was redesigned from a legacy system into a scalable full-stack solution with server-side rendering, multilingual support, secure authentication, and automated communication workflows.

Technologies: Next.js (SSR), React.js, TypeScript, Zustand, TanStack Query, React Hook Form, Tailwind CSS, shadcn/ui, i18n, NestJS, TypeORM, PostgreSQL (Supabase), Supabase Auth, Supabase Storage, RBAC, Twilio, Gmail SMTP, WhatsApp Click-to-Chat, Docker.

Responsibilities:

• Re-engineered the legacy platform into a modern Next.js and NestJS full-stack architecture with server-side rendering and a scalable application structure.
• Developed SEO-optimized property listing pages with dynamic routing, metadata optimization, multilingual support, and RTL localization.
• Built a secure Admin Panel with CRUD operations, property management, inquiry tracking, RBAC, and role-based authentication.
• Designed and developed REST APIs using NestJS, TypeORM, and PostgreSQL to support property management and business workflows.
• Configured Supabase Authentication, PostgreSQL, database migrations, and optimized storage for high-resolution property images.
• Implemented server-state management using TanStack Query and developed multi-step forms with React Hook Form.
• Integrated Twilio, Gmail SMTP, and WhatsApp Click-to-Chat to automate customer communication and lead management.
• Optimized application performance through code splitting, image optimization, caching strategies, and database query optimization.
• Collaborated with designers and stakeholders to deliver responsive, accessible, and user-friendly interfaces across desktop and mobile devices.
• Participated in architecture discussions, code reviews, Agile development processes, and production deployments.

Results

Delivered a scalable, SEO-friendly full-stack platform that significantly improved property discovery, lead generation, and operational efficiency for real estate agents. Successfully migrated the legacy application to a modern architecture, implemented a centralized Admin Panel, automated customer communication workflows, and enhanced platform performance, enabling the agency to efficiently manage a growing international property portfolio.

Personal Finance & Goal-Setting Mobile Application

MakeMebirthday - Web Version
App Store
Google Play

MakeMebirthday is a cross-platform personal finance and goal-setting mobile application designed to encourage financial discipline through positive reinforcement. The platform combines expense tracking with a unique micro-goal system, allowing users to set short-term financial targets, track daily spending, and reward themselves after reaching savings milestones.

Technologies
React Native, Expo, TypeScript, Expo Router, Zustand, TanStack Query, React Hook Form, Zod, Firebase Authentication, Cloud Firestore, Firebase Cloud Functions, Firebase Cloud Messaging, Firebase Analytics, Firebase Crashlytics, RevenueCat, Expo Notifications, Expo SecureStore, AsyncStorage, EAS Build, EAS Submit.

Responsibilities

- Developed a cross-platform React Native financial tracking application for iOS and Android with responsive interfaces for managing daily budgets, expenses, savings goals, and personal financial activity.
- Designed a scalable TypeScript application architecture with reusable React Native components, centralized state management, API/data synchronization, and clear separation of business and presentation logic.
- Implemented secure authentication using Firebase Authentication with Google Sign-In, Sign in with Apple, and Email/Password authentication, including secure session and credential handling.
- Developed a five-step KYC onboarding flow using React Hook Form and Zod validation to collect user preferences and personalize financial goals and application behavior.
- Built a Goal Engine that allows users to create financial targets with images, target amounts, and deadlines, automatically calculating the daily savings required to achieve each goal.
- Developed a real-time financial dashboard with daily balance calculations, goal progress visualization, transaction history, savings statistics, and personalized financial insights.
- Built an interactive calendar interface for navigating historical financial activity, reviewing daily transactions, and tracking completed savings goals.
- Managed application and server state using Zustand and TanStack Query, including local caching, optimistic updates, persistent state, and synchronization with Cloud Firestore.
- Designed a scalable timezone-aware notification architecture using Firebase Cloud Functions, Firebase Cloud Messaging, and Expo Notifications to deliver scheduled goal reminders, transaction prompts, and daily check-ins to specific user segments.
- Implemented deep linking and notification-driven navigation using Expo Router, allowing users to open relevant goals, transactions, and application screens directly from push notifications.
- Integrated RevenueCat for iOS and Android subscription management, including subscription tiers, entitlement validation, purchase restoration, paywall functionality, and three-day free-trial logic.
- Developed Firebase Cloud Functions for scheduled backend jobs, automated user cleanup, notification processing, and application data maintenance.
- Integrated Firebase Analytics and Crashlytics to monitor user behavior, application stability, production crashes, and key product events.
- Optimized mobile performance through efficient Firestore queries, local caching, optimized component rendering, lazy loading, and minimized unnecessary network requests.
- Configured EAS Build and EAS Submit workflows and managed production releases for both the Apple App Store and Google Play.

Results
Delivered and released a production-ready React Native application for both iOS and Android, covering the full mobile development lifecycle from application architecture and Firebase integration to testing and store deployment. Built a scalable micro-goal and financial tracking system with real-time data synchronization, subscription monetization, and personalized user experiences. Designed a timezone-aware notification architecture capable of delivering scheduled reminders to users across multiple regions while maintaining efficient Firebase usage and reliable application performance.

Full-stack Developer for Car Insurance provider YDE Insurance

YDE Portal

SDX Web is a high-load enterprise platform that enables vehicle dealerships, insurance providers, and internal operators to manage insurance claims, vehicle inspections, repair estimates, agreements, and policy workflows. The platform supports complex business processes through real-time status tracking, role-based access, scalable workflow automation, and data-intensive enterprise applications, serving multiple business units across the insurance industry.

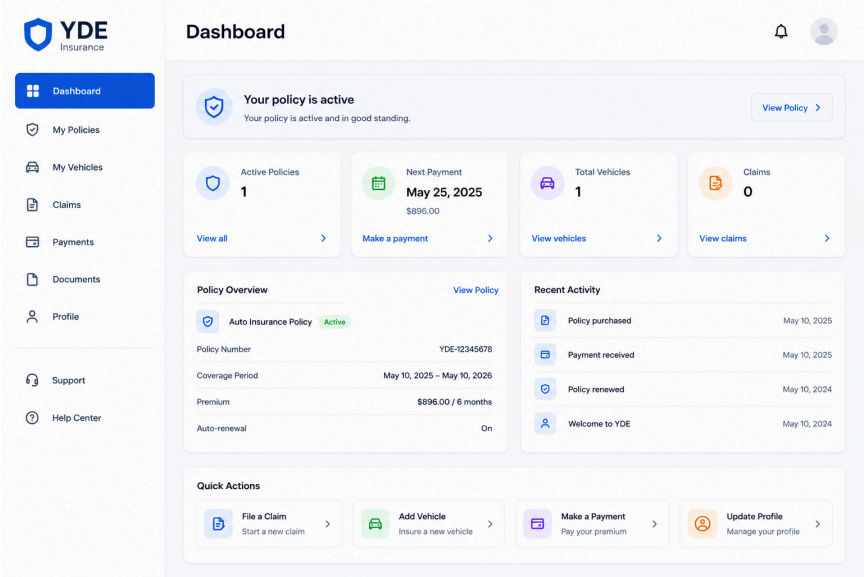

Technologies:

React 19, Next.js 15 (App Router), TypeScript, Tailwind CSS v4, Material UI, Radix UI, shadcn/ui, TanStack Query, Zustand, React Hook Form, Zod, Node.js, NestJS, REST API, WebSockets, PostgreSQL, AWS S3, Docker, CI/CD, Claude Code, GitHub Copilot.

Responsibilities:

- Collaborated with cross-functional teams of developers, QA engineers, designers, and product owners following Agile and Scrum methodologies.
- Developed scalable full-stack features for insurance claim processing, agreement management, vehicle inspections, and repair estimation workflows.
- Built reusable frontend components and shared business modules, improving maintainability and reducing code duplication across multiple products.
- Developed REST APIs and backend services using NestJS and PostgreSQL to support insurance workflows, claim lifecycle management, and business operations.
- Implemented complex data-driven user interfaces, including paginated data tables, advanced filtering, vehicle damage assessment tools, and multi-step business workflows.
- Managed server-state synchronization using TanStack Query with caching, optimistic updates, pagination, and efficient API communication.
- Participated in API design, database integration, business logic implementation, and architecture discussions for enterprise insurance solutions.
- Integrated real-time status tracking and workflow notifications using WebSocket-based communication.
- Optimized application performance through lazy loading, query optimization, debounced search, memoization, and efficient rendering techniques.
- Contributed to CI/CD pipelines, code reviews, testing, debugging, production deployments, and continuous platform improvements.
- Leveraged AI-assisted development tools, including Claude Code and GitHub Copilot, to accelerate feature implementation, refactoring, debugging, and technical documentation.

Results:
Successfully contributed to the delivery of a scalable enterprise platform supporting insurance claim processing, vehicle inspections, repair estimates, and agreement management across multiple business units. Improved application maintainability through reusable architecture, enhanced system performance for data-intensive workflows, implemented real-time status tracking, and delivered reliable full-stack solutions that streamlined business operations and increased platform scalability

Full-stack Developer for B2B AI-powered platform

link to the project is under NDA

AI-powered enterprise SaaS platform designed to help organizations manage digital transformation, automate business workflows, and optimize enterprise operations. The platform provides AI-assisted analytics, workflow automation, operational dashboards, document management, collaboration tools, and enterprise reporting, enabling companies to streamline complex business processes and improve organizational efficiency.

Technologies:
Next.js, React.js, TanStack Query, TypeScript, Tailwind CSS, Material UI, shadcn/ui, Node.js, NestJS, REST API, OpenAI API, Stripe, Chart.js, RBAC, JWT, PostgreSQL, Docker, CI/CD, Workflow Automation.

Responsibilities:

- Developed full-stack features for enterprise workflow automation, digital transformation, and business process management.
- Built responsive dashboards, KPI monitoring, analytics, reporting modules, and AI-assisted operational workspaces using React and Next.js.
- Developed scalable REST APIs and backend services using NestJS to support workflow orchestration, task management, and enterprise data processing.
- Implemented role-based access control (RBAC), secure authentication, and multi-role user workflows for enterprise environments.
- Developed document management features and enterprise knowledge retrieval functionality for centralized business information.
- Integrated AI-powered capabilities using OpenAI API to generate business assets, operational insights, and workflow recommendations.
- Implemented real-time collaboration features, activity tracking, notification systems, approval workflows, and automated process pipelines.
- Optimized application performance through efficient data processing, API optimization, lazy loading, and scalable frontend architecture.
- Integrated third-party enterprise services, payment processing with Stripe, and external business platforms.
- Collaborated with product managers, designers, and engineering teams during architecture discussions, feature planning, code reviews, and Agile development.

Results:
Successfully contributed to the development of a scalable AI-powered enterprise SaaS platform supporting workflow automation, digital transformation, and operational analytics. Delivered reusable full-stack architecture, optimized application performance for enterprise-scale datasets, implemented secure multi-role access, AI-assisted business workflows, and responsive dashboard systems, enabling organizations to streamline operations, improve collaboration, and manage complex business processes more efficiently.
